

Élan

Console Systems for Multitrack Recording and Mixing.

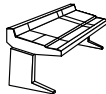

The Élan console series brings full professional power to mid range recording studios. Whether tracking or mixing, its features, performance, and professional appearance will give your facility a significant competitive advantage. And the work you send out will sound absolutely first rate because the Élan is free of the technical compromises that limit other mid-range consoles. Neotek consoles are professional tools, not hobbyist toys. For many reasons, the Élan has become the console of choice for the studios of artists and engineers with critical ears and modern production techniques.

Élan performance is the sound of success.

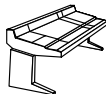

When work leaves your facility, the way it sounds is what really counts. That's why the Élan's design is focused on outstanding audio performance. Your mics and samples start with Neotek's best discrete mic preamp design, not the one-chip solution you'd find in lesser consoles. The equalizer gives you four sweep bands of powerful yet musical control. The Élan, like all Neotek consoles, is exceptionally clean and quiet. And the technical performance of the Élan means you never have to work around complicated patches or routings to avoid noise or crosstalk—feel free to be your most creative. The Élan's wide bandwidth and brilliant transparency will give you complete confidence in the material you send out.

Features ahead of its class, features that mean real value.

We've focused the Élan on features that offer engineers and studio owners real benefits. The Élan gives you the power of in-line monitoring plus extra signal routing possibilities. In mixing, its monitor control becomes an additional input. This doubles the size of your console to provide the capacity needed in modern studios, and you can create up to 30 auxiliary sends. The Élan is the only console in its class with 24 true multitrack buses. It's the only one that gives you three mute groups and in-place solo. And high-resolution bargraph meters with true VU and peak ballistics give you an accurate measure of signal levels. The Élan's ease of use means you'll spend more time creating, less time correcting.

Construction quality sends the right message.

The classic build quality of the Élan sets it apart. You can immediately feel its solid construction. The frame is impressively massive and module panels are heavy extrusions, not folded sheet metal. The patchbay uses long frame metal jacks, shielded cable, and beefy custom extrusions. Your clients will understand that your console, your facility, and your work are fully professional. And when you lift the hood and check the modules you'll see advanced circuit designs and the best quality components throughout. That's important in maintaining performance over extra years of service—so your financial manager will get the message, too. The Élan is built for the long run, and it holds its value and performance year after year.

A complete choice of options to customize your Élan.

There are a number of ordering options for your Élan, including your choice of factory installed moving fader automation systems. Call us at 800-582-3555 and we'll send you additional brochures on ordering options, frame sizes, technical specifications, and a more detailed system description. With its outstanding build quality, professional features, and exceptional sonic performance, the Élan in your studio will produce work with the quality and impact expected of the most expensively equipped facilities.
